

Experimental Constraints on Landau-Siegel Zeros: Q_{47} Spectral Gap Analysis

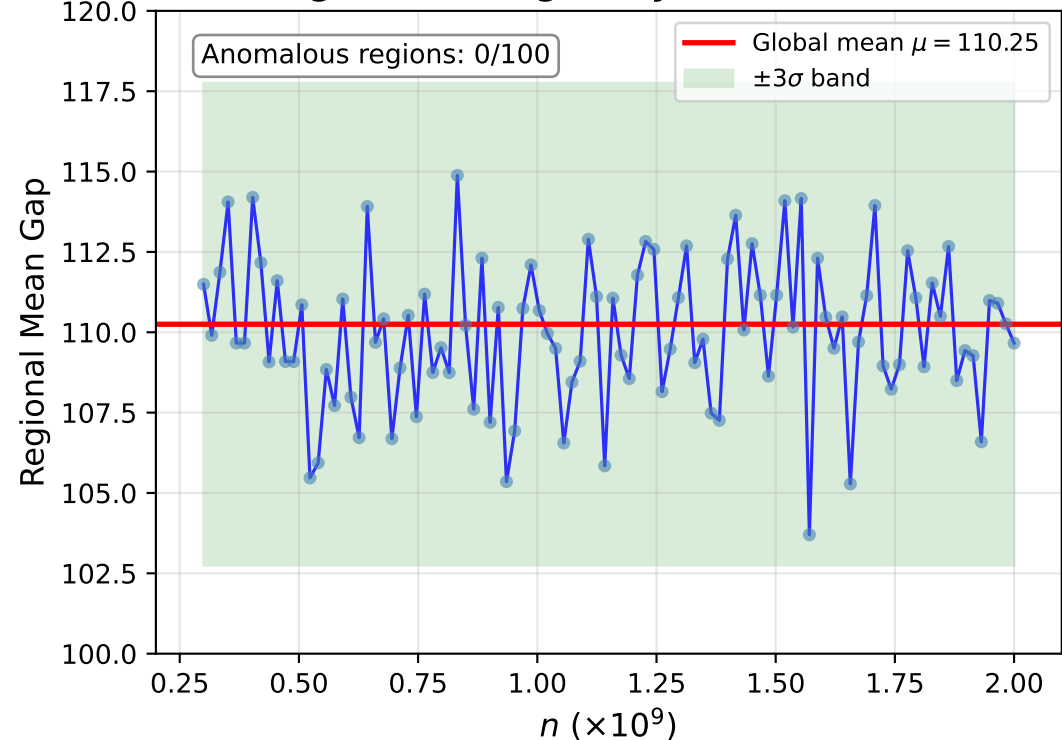

(a) Gap Distribution: Poisson Consistency

(b) Resolution of Flagged Region ($n \approx 1.4 \times 10^9$)

(c) Regional Homogeneity (100 subdivisions)

(d) Final Verified Statistics

Diagnostic	Observed	Poisson	Status
Coefficient of Variation	0.995	1.000	CONSISTENT
Max Gap Ratio	0.99	1.00	CONSISTENT
Cramer Ratio	< 1.5	< 2.0	BOUNDED
Regional Anomalies	0/100	0	UNIFORM

Conclusion: No evidence for Landau-Siegel zeros.
Gap distribution consistent with GRH predictions.
